## Introduction

My name is Egemen Kayadibi, I'm 25 years old and the founder of Project Elysian Coin. I've been involved in the cryptoworld for quite some time now, as a trader and as a fanatical supporter. The blockchain technology has fascinated me from the start and I want to share this fantastic experience with other people.

Around me, I keep hearing more and more that people want to join the cryptoworld. However, a barrier for these people is the technical knowledge needed to join. Because of this I started with Project Elysian Coin. I want to help and guide people at their start in the cryptoworld.

To accomplish this, I've created three packages to help people create their own token and guide them with an ICO. My goal is to advice people about their startup in crypto and to give a push in the right direction. We want to bring the world closer to crypto. I believe in the power of innovation. Digital currencies are a technology which can improve the world. To make sure that everyone's first experience with cryptocurrencies is a good one, we provide the best of services. For example, availability by telephone and WhatsApp.

We give more information about the company, the team, the packages we sell and our policy in this Whitepaper. Do you have any questions which aren't answered after reading this Whitepaper, please contact us.

## The Company

The team from Project Elysian Coin wants to bring the world closer to cryptocurrency by providing guidance and advice regarding the creation of your own coin. We're a registered company with the Dutch government and use Dutch bank accounts which we will reveal partly. Our team with Project Elysian Coin is composed of experienced developers and traders. They have all been involved in the cryptoworld for years, with a background of the business life. We also work with a company called PMM Media.

We will start with an ICO on October 10<sup>th</sup> to accomplish our goal. We use a low price during the ICO sale because we want to see an increase in the price when the ICO sale ends. We could ask for a higher price if we look at other similar projects, but we don't want that because we're aiming for a lot of positivity when the coin launches on an exchange.

Like said before, we sell packages for the creation of a coin and guidance during an ICO. We offer three packages with varying content. We want to generate profit with the selling of these packages. With a percentage of this profit we will buy back coins to create a rise in the price. In connection with explosive price falls and minimal price rises, we will allow large parts of the money we collect with the ICO to be paid out in fiat currencies (EUR/USD). We will keep our community up to date about these payouts. We want to function as transparent as possible and we don't want to betray the trust of our investors.

## Technical aspect

Project Elysian Coin is an ERC20 token build on the Ethereum blockchain. The Ethereum blockchain is the standard for the creating of ERC20 tokens. Project Elysian Coin can be used on the existing infrastructure of Ethereum, for example on the different wallets:

- Ethereum mist wallet (Core wallet)
- MetaMask
- MyEtherWallet
- Parity
- imToken (iPhone & Android)
- Trust (iPhone & Android)
- Cipher (iPhone & Android)
- Coinomi (iPhone & Android)
- MyEtherWallet + Ledger
- MyEtherwallet + Trezor

Project Elysian Coin has a fixed supply of 100.000.000 tokens and no more coins will be created or mined. The coin is also tradeable and fractional divisible. Fractional divisible means that the creator can choose how many decimals there could be after the comma. For example, Project Elysian Coin has a maximum of three decimals, which means that the minimal transaction could be 0,001 PEC. The maximum number of decimals for a coin is 18.

The token sale will start on October 10 and lasts for about three months till January 30. Below you'll find a distribution of the tokens. Tokens that are not sold during the ICO will be sent to a burn address.

Every month we will invest a part of our profit from the sold packages into Project Elysian Coin starting on 1 February 2019.

Note: you can't pay from an exchange during the ICO. The number of tokens will be sent to the address from which we'll receive the ETH. Because Project Elysian Coin isn't available on an exchange yet, you won't receive any tokens when you pay from an exchange.

## Team

Our team is composed of five very experienced, enthusiastic employees. We also work with interns and volunteers in addition to these five dedicated employees. They are not on the website but make a big contribution to make a big success of our project. Everyone on the team is involved and we work together for the best results for our project. Besides our team, we're working with PMM Media.

Our core team is composed of the following people:

Founder/CEO: Egemen Kayadibi

Chief Technology Officer: Lionel Filemon

Head of Interior Design: Dominique

Blockchain Specialist: Harvey

Chief of Marketing: Onur Ortaakarsuci

## Custom Coin Sale

### Standard Package

Our first package is called the standard package. We've created this package with the idea to help private individuals and companies to create their own coin/token and give provide them easy access into the cryptoworld. We create the coin entirely according to your wishes. We use a secure contract code, which is also admitted on exchanges. This contract code will be registered on Etherscan. Etherscan is a website where investors can see all the transactions that has taken place on the code. We think that provides trust.

We would of course want every coin we create to be a success. However, the idea behind creating a coin/token is not to get rich fast. It is meant to be a startup for a company. Furthermore, we will start criminal proceedings when we are aware that a coin/token is being or will be misused for criminal purposes.

Price: €1.500 ex. btw

### Advanced Package

Our second package is called the advanced package. We've created this package with the idea to help private individuals and companies to create their own coin/token and a corresponding website. We want to provide our customers easy access into the cryptoworld. We create the coin entirely according to your wishes. We use a secure contract code, which is also admitted on exchanges. This contract code will be registered on Etherscan. Etherscan is a website where investors can see all the transactions that has taken place on the code. We think that provides trust.

We also take care of the website, web hosting and the server on which the website is built. The layout and content of the website will be designed entirely according to your wishes. We assume that you provide the texts and images. There is also the possibility to create these for you at a reduced rate. However, this only applies to the images on the website. The logo of the coin is designed by us in agreement with the buyer.

We would of course want every coin we create to be a success. However, the idea behind creating a coin/token is not to get rich fast. It is meant to be a startup for a company. Furthermore, we will start criminal proceedings when we are aware that a coin/token is being or will be misused for criminal purposes.

Price: €2.500 ex. btw

## Total Package

Our third and last package is the most exclusive and complete package that we offer. The intention of this package is to help individuals and companies create their startup in the cryptoworld. In this package we create a coin/token entirely according to your wishes, a corresponding website and a so-called ICO where money is collected to finance the project. We also report the coin/token on all platforms what we think are useful and/or necessary for the token.

We use a secure contract code, which is also admitted on exchanges. This contract code will be registered on Etherscan. Etherscan is a website where investors can see all the transactions that has taken place on the code. We think that provides trust.

We also take care of the website, web hosting and the server on which the website is built. The layout and content of the website will be designed entirely according to your wishes. We assume that you provide the texts and images. There is also the possibility to create these for you at a reduced rate. However, this only applies to the images on the website. The logo of the coin is designed by us in agreement with the buyer.

In addition to creating a coin/token and the website, we also assist in setting up an ICO. We know how much time it takes to create a coin/token and draw up a business plan. We will also assist and advise you here as much as possible. We will also advise you on the right path for opening business accounts and registrations at the Chamber of Commerce. Furthermore, we will also want to announce the coin at exchanges to be able to offer the coin to the public, where potential cryptocurrency traders may be present. However, this is something in which the company itself must decide what costs they want to spend on it. Without exchanges, a private coin is created. A private coin means that it can only be traded on the wallets where the token is registered and not for the public. This also means that the coin has no value in the sense of euros or dollars. However, the coin could possibly be used as a means of payment, provided that an application is built for this.

In principle, we make everything necessary to create a token and start an ICO. We will also register the token on all platforms known to us and mention the token as a partner on our website. However, it is important to know that if a policy is so bad a coin can collapse at once. The reason for this is that the entire market is based on supply and demand and the confidence of the investors. When investors lose their trust and sell their coins, the coin could fall extremely hard in value and therefore could not be worth anything anymore. This also applies the other way around, if there is a lot of confidence in the coin and demand for the coin, the value could be extremely high.

We would of course want every coin we create to be a success. However, the idea behind creating a coin/token is not to get rich fast. It is meant to be a startup for a company. Furthermore, we will start criminal proceedings when we are aware that a coin/token is being or will be misused for criminal purposes.

The advice that we give based on ideas from the buyer are given during the conversation of purchasing a package. We do this because we always want to give the best advice for the next steps for your project in the cryptoworld after we have created the coin for you.

Price: €4.000 ex btw

## Roadmap

### *October 2018:*

The ICO sale will start at October 10

### *December 2018:*

We will create the first projects for our customers

### *January 2019:*

The ICO will end at January 30

Project Elysian Coin (PEC) will be available on Binance and Hitbtc

### *February 2019:*

A part of the profit of Project Elysian Coin will be invested in the growth of the currency

Sales target: 50 customers will have their own cryptocurrency

### *March 2019:*

Expansion of our team and activities

### *April 2019:*

Launch of our own web wallet

### *June 2019:*

Launch of our own mobile wallet

### *August 2019:*

Big network of cooperating clients

## Cookie Policy

Project Elysian Coin uses cookies. Because we want to guarantee your privacy and improve the user-friendliness of your visit to our website, we think it is important that you know how and why we use cookies.

Our website uses cookies to distinguish you from other users for our website. This helps us to offer you a good on our website and helps us to improve our website. By continuing to browse our website you agree to the use of cookies and the terms of this policy.

### What are cookies?

Cookies are small text files that your computer or mobile device stores when you use our website. Cookies contain information that is transferred to your hard drive. We use the following cookies:

- Strictly necessary cookies. These are cookies that are necessary for the operation of our website.
- Analytic / performance cookies. These help us to recognize and count the number of visitors and to see how visitors behave on our website. This helps us to improve the way our website works, for example ensuring that users easily find what they are looking for.
- Targeting cookies. These cookies record your visits on our website, the pages you have visited and the links you have followed.

You can block the cookies by activating this setting in your browser that allows you to refuse a part or all cookies. However, if you use the browser setting to block all cookies, you may not have access to posted parts of our website.

## Privacy Policy

We at Project Elysian Coin are committed to protecting your privacy. This privacy policy provides information about the collection, processing and use of personal data during the use of our website.

### Data processing in communication with the website

#### *Visiting our website*

When you visit our website, our hosting provider automatically encrypts and stores various information in the so-called server logfiles that your browser sends to us. The mentioned information/data is not connected to a specific person or connected to other sources.

The IP addresses are assessed, together with other data, for the case there is an attack on the infrastructure of the network or other unauthorized use or abuse of the website, with the aim of security.

#### *Use of cookies on the website*

Our website uses cookies. Cookies are text files that are stored in a computer system via an internet browser. Many internet sites and servers use cookies. Many cookies contain a so-called Cookie ID. A Cookie ID is the unique identifier of a cookie. Using cookies, we can provide our users with more user-friendly services that would not be possible without cookies. For detailed information about the cookies we use and the purpose for which we use them, see our Cookie policy.

#### *Social Media*

We use plug-ins from social networks such as Twitter, Instagram, Facebook, Reddit, Bitcointalk, LinkedIn and Telegram. When you activate it (by clicking on it), the operators of the respective social network can register that you are visiting their website and use this data. The processing of this personal information is the responsibility of the social media platform and is done according to their privacy policy. Please read the privacy policy of these social media platforms. Project Elysian Coin is not responsible for data collected by these social media platforms. We use these platforms only to inform our community and answer questions.

#### *Event registration*

To register via our website for an event organized by Project Elysian Coin we can request registration details such as first and last name and email. We use this information and other information that you voluntarily provide only to execute the agreement, unless otherwise stated in the privacy policy or if you specifically do not give permission for this. We keep the registered data to register the purchase of our products, contact you in case of questions or a problem and to ensure correct payment. Since we are a registered company in the Netherlands, we must keep certain details of our customers and be able to reveal them if the government requests this.

### *Other parties who have access to the information we collect*

Except for the provider of our website, we will not make your personal details available to third parties.

### *Data security*

We use appropriate technical and organizational security measures to protect your stored personal data from manipulation, partial or complete loss and unauthorized access for third parties. Our safety measures are continuously improved in line with technical developments.

Please note that any data that is sent to us via the internet (e.g. communication by e-mail) is generally not entirely secure and we accept no liability for data sent via the internet.

Complete protection is technically not possible.

This information does not apply to the websites of third parties and the corresponding links on our website. Project Elysian Coin accepts no responsibility or liability for this.

### *Updates to our privacy policy*

Project Elysian Coin will change the privacy policy from time to time and we will inform you via the website about changes made in our policy. The current version of the privacy policy, as published, is applicable.

Do not hesitate to contact us if you have questions by contacting us on [info@projectelysiancoin.com](mailto:info@projectelysiancoin.com)
